## EDUCATION

---

### University of Edinburgh

Edinburgh, Scotland

#### *Doctor of Philosophy in GeoInformatics*

Sept 2018 – present

Fully funded by NERC, and in collaboration with the MET Office

Under Edinburgh Multidisciplinary Doctoral Training Partnership (E3DTP) programme

*Topic:* Using machine learning to parameterize climate and weather processes: a case-study on convection

*Supervisors:* Prof. Simon Tett, Prof. Amos Storkey, Dr. Keith Williams

### University of Oxford

Oxford, England

#### *Master of Engineering in Information Engineering; ranked 3<sup>rd</sup> in cohort*

Oct 2014 – Jun 2018

Fully funded by John Swire & Sons Ltd., and funded by college and department

Specialized in machine learning and control theory

*Thesis Topic:* A generic model and a distributed algorithm for station based bike sharing systems

*Supervisor:* Prof. Kostas Margellos

## EXPERIENCE

---

### Taro Studio

Edinburgh, Scotland

#### *Co-founder*

Feb 2019 – present

Designing a next-gen weather app that understands personalized environmental perception using machine learning

### Royal Botanic Garden Edinburgh

Edinburgh, Scotland

#### *Data Scientist*

Jan 2019 – Mar 2019

Analyzing spatial climate data to investigate the threats to tropical forest and carbon and biodiversity loss

### HYPED

Edinburgh, Scotland

#### *Software Engineer*

Sept 2018 – present

Designing a pod navigation system using Kalman filter for Hyperloop, a revolutionary mode of transport

### Oxford Strategy Group Digital

Oxford, England

#### *Associate Digital Consultant*

Jan 2018 – Jun 2018

A student-led digital consultancy in the UK

Provided digital consultancy service in data science

### Hong Kong Government

Hong Kong

#### *Administrative Service Summer Intern*

Aug 2017 – Sept 2017

Conducted research on issues relating to application of IT to traffic-related matters

## PROJECTS

---

Codes are available on [github.com/edenau](https://github.com/edenau).

- **Deep learning:** PhD project, analyzing spatio-temporal climate data by supervised learning
- **Data visualization:** visualized bike sharing systems using interactive maps and animations
- **Distributed optimization:** Master's project, constructed optimization algorithms in a distributed computing framework, and applied it to balancing bike sharing systems with significant improvement in performance
- **Camera calibration:** built a calibration algorithm for pinhole cameras by machine vision techniques
- **Engineering product design:** designed a novel prosthetics with use of fast and wireless communication protocols
- **Android APP:** designed a simple APP in four days for one to explore a city with ease
- **Interactive system design:** high school project, built a user-friendly examination sitting arrangement system

## SKILLS

---

- **Programming languages:** Python, MATLAB, C, C++, Java, Pascal,  $\text{\LaTeX}$
- **Technologies:** Git, SolidWorks, GIS, Rose-Cylc
- **Natural languages:** English, Mandarin, Cantonese, Taiwanese, Spanish
- **Writing:** data science blogger on Medium @edenau
- **Public speaking:** gave talks regarding NGOs, machine learning etc.
