

---

**EDUCATION**

---

**University of Edinburgh**

Edinburgh, Scotland

***Doctor of Philosophy in GeoInformatics****Sept 2018 – present*

Fully funded by NERC, and in collaboration with the MET Office

Under Edinburgh Multidisciplinary Doctoral Training Partnership (E3DTP) programme

*Topic:* Using machine learning to parameterize climate and weather processes: a case-study on convection*Supervisors:* Prof. Simon Tett, Prof. Amos Storkey, Dr. Keith Williams**University of Oxford**

Oxford, England

***Master of Engineering in Information Engineering; ranked 3<sup>rd</sup> in cohort****Oct 2014 – Jun 2018*

Fully funded by John Swire &amp; Sons Ltd., and funded by college and department

Specialized in machine learning and control theory

*Thesis Topic:* A generic model and a distributed algorithm for station based bike sharing systems*Supervisor:* Prof. Kostas Margellos

---

**EXPERIENCE**

---

**Royal Botanic Garden Edinburgh**

Edinburgh, Scotland

***Part-time Data Scientist****Jan 2019 – present*

Analyzing spatial climate data to investigate the threats to tropical forest and carbon and biodiversity loss

**HYPED**

Edinburgh, Scotland

***Software Engineer****Sept 2018 – present*

Designing a pod navigation system using Kalman filter for Hyperloop, a revolutionary mode of transport

**Oxford Strategy Group Digital**

Oxford, England

***Associate Digital Consultant****Jan 2018 – Jun 2018*

A student-led digital consultancy in the UK

Provided digital consultancy service in data science

**Hong Kong Government**

Hong Kong

***Administrative Service Summer Intern****Aug 2017 – Sept 2017*

Conducted research on issues relating to application of IT to traffic-related matters

**Hung Fook Tong**

Hong Kong

***Summer Intern****Jul 2016 – Sept 2016*

Analyzed data from their retail and e-commerce business and proposed business strategies

---

**PROJECTS**

---

Codes are available on [github.com/edenau](https://github.com/edenau).

- **GIS:** analyzing geographic data
- **Deep learning - *TensorFlow*:** PhD project, analyzing spatio-temporal climate data by supervised learning
- **Distributed optimization:** Master's project, constructed optimization algorithms in a distributed computing framework, and applied it to balancing bike sharing systems with significant improvement in performance
- **Camera calibration:** built a calibration algorithm for pinhole cameras by machine vision techniques
- **Engineering product design:** designed a novel prosthetics with use of fast and wireless communication protocols
- **Android APP:** designed a simple APP in four days for one to explore a city with ease
- **Interactive system design:** high school project, built a user-friendly examination sitting arrangement system

---

**SKILLS**

---

- **Programming languages:** Python, MATLAB, C, C++, Java, Pascal, Prolog, L<sup>A</sup>T<sub>E</sub>X
- **Technologies:** Tableau, SolidWorks
- **Natural languages:** English, Mandarin, Cantonese, Taiwanese, Spanish
