EDUCATION

University of Edinburgh — Edinburgh, Scotland
Doctor of Philosophy in GeoInformatics — *Sept 2018 – present*
  Fully funded by NERC, and in collaboration with the MET Office
  Under Edinburgh Multidisciplinary Doctoral Training Partnership (E3DTP) programme
  Topic: Using machine learning to parameterize climate and weather processes: a case-study on convection
  Supervisors: Prof. Simon Tett, Prof. Amos Storkey, Dr. Keith Williams

University of Oxford — Oxford, England
Master of Engineering in Information Engineering; ranked 3rd in cohort — *Oct 2014 – Jun 2018*
  Fully funded by John Swire & Sons Ltd., and funded by college and department
  Specialized in machine learning and control theory
  Thesis Topic: A generic model and a distributed algorithm for station based bike sharing systems
  Supervisor: Prof. Kostas Margellos

EXPERIENCE

Medium — @edenau
Top Writer in Technology — *Dec 2018 – present*
  One of top 10 writers in technology

Lawrence Berkeley National Laboratory — Berkeley, CA
Research Fellow — *Jul 2019 – Oct 2019*
  Developed generative deep learning models for super-resolution of cloud resolving models

Taro Studio — Edinburgh, Scotland
Co-founder — *Feb 2019 – Sept 2019*
  Designed a next-gen weather app that understands personalized environmental perception using machine learning

Royal Botanic Garden Edinburgh — Edinburgh, Scotland
Data Scientist — *Jan 2019 – Mar 2019*
  Analyzed spatial climate data to investigate the threats to tropical forest and carbon and biodiversity loss

HYPED — Edinburgh, Scotland
Software Engineer — *Sept 2018 – Jun 2019*
  Designed a pod navigation system using Kalman filter for Hyperloop, a revolutionary mode of transport

Oxford Strategy Group Digital — Oxford, England
Associate Digital Consultant — *Jan 2018 – Jun 2018*
  A student-led digital consultancy in the UK
  Provided digital consultancy service in data science

PROJECTS

Codes are available on github.com/edenau.

- **Super-resolution GAN**: Leveraged SRGAN in enhancing spatial resolution of cloud resolving model outputs
- **Deep learning**: PhD project, analyzing spatio-temporal climate data by supervised learning
- **Data visualization**: visualized bike sharing systems using interactive maps and animations
- **Distributed optimization**: Master's project, constructed optimization algorithms in a distributed computing framework, and applied it to balancing bike sharing systems with significant improvement in performance
- **Camera calibration**: built a calibration algorithm for pinhole cameras by machine vision techniques
- **Engineering product design**: designed a novel prosthetics with use of fast and wireless communication protocols
- **Android APP**: designed a simple APP in four days for one to explore a city with ease
- **Interactive system design**: high school project, built a user-friendly examination sitting arrangement system

Skills

- **Programming languages**: Python, C++, MATLAB, Pascal
- **Markup languages**: Markdown, LaTeX, Beamer
- **Python frameworks**: NumPy, SciPy, pandas, Matplotlib, seaborn, scikit-learn, TensorFlow 2.0, Sphinx, Flask
- **Technologies**: GitHub, FFmpeg, SolidWorks, Rose-Cylc
- **Natural languages**: English, Mandarin, Cantonese, Taiwanese, Spanish
- **Public speaking**: gave talks regarding NGOs, machine learning etc.
- **Extracurricular**: Hass.io, neo-classical music, languages, (association) football
